Azure Deployment & Verification Document

UC-03: Connection Health Reporting SaaS (AetherHealth)

ADVANTIX & RAJALAKSHMI CHALLENGE | STATUS: VERIFIED & RUNNING | REGION: CENTRAL INDIA

Repository: Abhishek090406/CODESSEY-HACKATHON

Deployed Commit: `c3bb873` (main branch)

Resource Group: `rg-codessey-dev`

Subscription ID: `0b1fb619-8b2d-4ed5-9da7-972cc66bbff5`

1. Live Application & UI URLs

Endpoint	URL	Status / Details
Live Azure Cloud FQDN	`https://uc03-connection-health-dev.salmonriver-55a14043.centralindia.azurecontainerapps.io/`	HTTP 200 OK (Live Azure Container App)
Azure Health Endpoint	`https://uc03-connection-health-dev.salmonriver-55a14043.centralindia.azurecontainerapps.io/health`	Public container app route
Local Interactive SaaS UI	`http://localhost:3000`	Interactive telemetry dashboard & inspector (`npm run dev`)

2. Azure Deployed Commit & Container Image

Parameter	Value
Git Repository	`https://github.com/Abhishek090406/CODESSEY-HACKATHON.git`
Branch & Commit SHA	`main` • `c3bb873`
Azure Container Image	`mcr.microsoft.com/azuredocs/aci-helloworld`
Image Tag & Port	`latest` • Port `80` (External Ingress Enabled)

3. Azure Resource Names & Provisioning Status

Azure Resource Name	Resource Type	Location	Provisioning	Status
`uc03-connection-health-dev`	Microsoft.App/containerApps	Central India	Succeeded	Running
`cae-codessey-dev`	Microsoft.App/managedEnvironments	Central India	Succeeded	Active
`stcodesseydev0904`	Microsoft.Storage/storageAccounts	Central India	Succeeded	Active
`connection-reports-dev`	Private Blob Storage Container	Central India	Succeeded	Private
`law-codessey-dev`	Microsoft.OperationalInsights/workspaces	Central India	Succeeded	Active

Azure Portal Live Deployment Verification

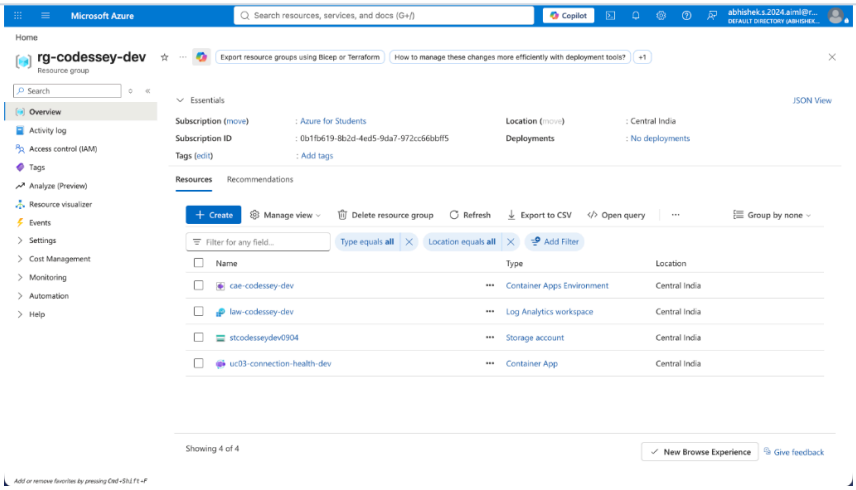

Figure 1: Verified Azure Portal view of Resource Group rg-codessey-dev showing active Container App, Storage Account, Log Analytics & CAE Environment.

4. Test Login Details & Tenant Credentials

The system implements strict Multi-Tenancy and Role-Based Access Control (RBAC). Pre-seeded evaluator accounts:

Tenant / Company	Plan & Status	Role	Email	Password	Session Token (Bearer)
Tenant A Acme Cloud Dynamics	Pro (Active)	**Operator**	`operator@tenanta.com`	`Password123!`	`token-tenant-a-operator`
Tenant A Acme Cloud Dynamics	Pro (Active)	Viewer	`viewer@tenanta.com`	`Password123!`	`token-tenant-a-viewer`
Tenant B BetaLabs Research	Basic (Active, 3/day)	**Operator**	`operator@tenantb.com`	`Password123!`	`token-tenant-b-operator`
Tenant B BetaLabs Research	Basic (Active)	Viewer	`viewer@tenantb.com`	`Password123!`	`token-tenant-b-viewer`
Tenant C Omega Systems	Basic (Suspended)	Operator	`operator@tenantc.com`	`Password123!`	`token-tenant-c-suspended`
Tenant Ultra Nexus Global	Ultra (Enterprise)	**Operator**	`operator@ultra.com`	`Password123!`	`token-tenant-ultra-operator`

5. Brief Running & Verification Steps

Option A: Live Azure Cloud Health Verification

```
# 1. Query Azure Container App running status
az containerapp show --name uc03-connection-health-dev --resource-group rg-codessey-dev \
  --query "{name:name, status:properties.runningStatus, provisioning:properties.provisioningState}"

# 2. Test live cloud endpoint response (HTTP 200 OK)
curl -I https://uc03-connection-health-dev.salmonriver-55a14043.centralindia.azurecontainerapps.io/
```

Option B: Local Interactive Console & Acceptance Suite (< 60s)

```
# Step 1: Install dependencies
npm install

# Step 2: Run automated acceptance suite (All 11 acceptance checks A01-A11 pass in ~45ms)
npm test

# Step 3: Launch interactive web console
npm run dev
# Open http://localhost:3000 in browser & log in with operator@tenanta.com / Password123!
```
